Tarak DHIEB

Computer Science Engineer

Professional Summary

Recent Computer Science Engineering graduate specialized in Artificial Intelligence, skilled in developing ML pipelines, computer vision, web and NLP applications. Demonstrated ability to deliver impactful projects through internships and academic work. Passionate about leveraging AI to solve real-world problems and continuously exploring emerging technologies.

Skills

Programming & Data	Python, SQL, C/C++, Pandas, Scikit-learn
AI & ML	PyTorch, OpenCV, HuggingFace, Transformers, LangChain, RAG
MLOps & Cloud	Kubernetes, Kubeflow, Docker, Azure AKS, GCS
Database Management	PostgreSQL, MongoDB, Pinecone
Web Development	Angular, Node.js, Express.js, REST APIs
Soft Skills	Effective Communication, Teamwork, creative problem solving, autonomy

Experience

Software Engineer - IRIS *Sep 2025 – Present*
Tunis, Tunisia

- Contributed to the digital transformation of the organization by developing and maintaining internal business applications.
- Designed and implemented full-stack solutions using Angular, .NET, and PostgreSQL, delivering scalable features.
- Mentored interns on software engineering and AI-related projects, providing technical guidance and supporting the adoption of AI-driven solutions within the organization.
  - **Tools** : Angular, .NET, PostgreSQL, RESTful APIs, Git, AI Solutions

Software Engineer Intern - FIS *Feb 2025 – Jun 2025*
Tunis, Tunisia GitHub Repo

- Developed a real-time LLM-powered chat application with multi-model support, improving developer productivity across teams.
- Built and deployed an end-to-end MLOps pipeline using Kubeflow, AKS, and Docker, enabling automated training and deployment of LLM models.
- Optimized LLM fine-tuning workflows with Unsloth, reducing training time by 90%.
  - **Tools** : Kubeflow, Kubernetes, AKS, Ollama, Flask, Angular, RESTful API, Docker, Unsloth, MLOps

AI Engineer Intern - OliveSoft *Jun 2024 – Sep 2024*
Sfax, Tunisia Web Site

- Designed and deployed a sentiment analysis model on 100K+ social media comments, achieving 92% accuracy and enabling data-driven marketing decisions.
- Automated data collection via web scraping pipelines (Apify, Python), reducing manual data-prep time by 70%.
  - **Tools** : Python, NLP, Web Scraping, Apify, GCS, Git

Projects

Full-Stack ERP System (Freelance Project) *Sep 2025 – Dec 2025*
Web-based ERP Platform

- Designed and developed a comprehensive web-based ERP system for business management as a freelance project.
- Implemented core modules including inventory management, financial tracking, and real-time reporting dashboards.
- Built a scalable RESTful backend and a responsive frontend optimized for usability and performance.
  - **Tools** : Angular, Node.js, PostgreSQL, REST APIs, Full-Stack Development

SpotWise Parking System *Dec 2024 – May 2024*
Design and Development Project GitHub Repo

- Engineered a computer vision system on Jetson Nano to detect parking space occupancy, reducing average parking time by 15%.
- Designed and deployed a mobile app enabling real-time parking reservations, significantly improving user convenience.
  - **Tools** : Computer Vision, OpenCV, YOLO, Fine-tuning, Jetson Nano

Education

MSc in Computer Science Engineering – Specialization in Artificial Intelligence *2022 – 2025*
National School of Computer Science – ENSI, Tunis, Tunisia

Preparatory Cycle in Mathematics and Physics *2020 – 2022*
Sfax Faculty of Science – FSS, Sfax, Tunisia

Languages

French: Intermediate | **English:** Upper intermediate(B2)
